Assignment

1- Read this article for having a review

<https://www.edureka.co/blog/polymorphism-in-java/>

then do this task as an exercise

Create a class `Dancer` that has age and name and a method `dance ()`

2- create another class `ElectricBoogieDancer` that extends `Dancer` and override `dance()` method

3- create another class `Breakdancer` that extends `Dancer` and override `dance()` method

in the main method , create 3 dancers instances and use an array of `Dancer[]` to call the `dance` method in the polymorphic way !!! ...use creativity for method `dance` in 3 classes :)))
