

ASSGN8

Assignment

- 1- Create a folder in your project and name it resource
- 2- Create a method that takes a list<String> as an argument and name it as "writeToFile"
- 3- Create a class name it as Address that consists of (buildingNo, StreetName, cityName, provinceName and postalCode)
- 4- in the main method create 5 fake addresses and add them into a list.
- 5- Call method writeToFile and save the values in the file
- 6- Create another method name it as "ReadFromFile" that returns a list of Address
- 7- call the method ReadFromFile() and show the address in the output.

** Try to find a way to insert data into the file, in a way that is feasible to take out the value and make the object again !!!!
